

Groww *pulse*

PRODUCT REQUIREMENTS DOCUMENT

1. Executive Summary

Groww pulse is an automated AI-driven insights engine and dashboard designed to collect, process, and summarize public app reviews from the Apple App Store and Google Play Store. It generates a scannable, role-specific "weekly pulse" report that highlights crucial user feedback trends over an 8-12 week rolling period, helping teams prioritize action without manual review digging.

2. Target Audience & Value Proposition

- **Product / Growth Teams:** Gain rapid visibility into emerging bugs, feature requests, and onboarding bottlenecks to decide what to build or fix next.
- **Support Teams:** Maintain awareness of dominant user sentiment and the most common complaints, ensuring support reps are aligned with user frustrations.
- **Leadership:** Receive a high-level, scannable weekly health pulse of the application's standing in the public markets.

3. Core Features & Capabilities

3.1 The Weekly Pulse Note

A strictly formatted summary artifact (≤ 250 words) designed for maximum scannability:

- **Top 3 Themes:** Extracts the most urgent topics out of a maximum of 5 categorized themes (e.g., Onboarding, Payments, Stability).
- **3 Real User Quotes:** Provides qualitative context with raw user feedback. All Personally Identifiable Information (PII) is completely redacted.
- **3 Action Ideas:** Tailored, actionable recommendations mapped directly to the Product, Support, and Leadership teams.

3.2 Dynamic Stakeholder Dashboard

A web-based interface providing real-time visual context to the weekly summaries:

- **Market Context Bar:** Displays current market index values and daily percentage changes at the top of the interface.
- **Customer Happiness Graph (NEW):** A dynamic, time-series visualization tracking overall user satisfaction and sentiment scores week-over-week, providing a quick visual read on user morale.
- **Urgency Heatmap:** A radar chart mapping critical app dimensions (e.g., App Stability, Customer Success, Portfolio View).
- **Data Diagnostics:** Visual breakdown of review volume by platform (Android vs. iOS) and sentiment distribution (Positive/Neutral/Negative).
- **Pipeline Status:** Indicates the last run date, active themes, and scraper health.

3.3 Personalized Report Delivery (Intake Page)

A dedicated, standalone page designed to seamlessly route the right insights to the right stakeholders:

- **Role & Email Capture:** A clean, user-friendly form asking for the user's email address and their specific role (Product, Support, or Leadership).
- **Personalized Email Automation:** Upon submission, the system automatically drafts a well-written, tailored email based on the selected role and sends it directly to the provided address.
- **PDF Attachment:** The customized email includes the generated weekly report securely attached as a fully formatted PDF.

3.4 The Data Library

A centralized archive separated from the main dashboard visualizations, serving as the historical system of record:

- **Monthly CSV Repository:** Houses all historical and current month's processed review data in downloadable CSV format, neatly organized by month.
- **PII-Scrubbed Guarantee:** Every CSV in the library is strictly sanitized of usernames, IDs, and emails, ensuring stakeholders can perform safe, deep-dive analyses offline.

4. Key Constraints & Data Policies

- **Public Data Only:** Strictly rely on public review exports. Scraping behind logins or paywalls is explicitly prohibited.
- **Theme Limitations:** The AI categorization model must restrict its output to a maximum of 5 distinct themes to prevent fragmentation.
- **Length Restriction:** The Weekly Pulse note must not exceed 250 words.
- **Strict PII Removal:** Absolutely no usernames, emails, device IDs, or account numbers may appear in the quotes, dashboard, or exported artifacts.

5. Implementation Phasing

Phase	Focus Area	Key Deliverable
1	Architecture & Setup	Environment setup, LLM selection, Repository creation.
2	Data Ingestion	App Store & Play Store public CSV connectors.
3	Sanitization	PII scrubbing and regex filtering scripts.
4	AI Thematic Grouping	Embedding generation and clustering (max 5 themes).
5	LLM Analysis	Prompt engineering for sentiment and action ideas.
6	Note Generation	Formatting the ≤250-word Weekly Pulse document.
7	Dashboard UI	Happiness graph, Heatmap, pipeline status, and market bar.
8	Library & Exports	CSV Data Library creation and PDF report generation.
9	Intake Page & Email	Role/Email form page and SMTP/Gmail integration.
10	Final Testing	

Phase	Focus Area	Key Deliverable
		End-to-end validation, README creation, demo video.
